

Third Party Code in TORO Services

This is a supplement to the Master Subscription Agreement (the “Agreement”) entered into by and between Customer and TORO and the terms are hereby incorporated by reference. Any capitalized terms used but not defined below have the meanings in the Agreement.

The Services contain code and libraries that we license from third parties. Some of these licenses require us to flow certain terms down to you.

This supplement was last updated: September 2, 2019

1. Open Source Software in the Services. The Services include components subject to the terms and conditions of “open source” software licenses. To the extent applicable, we will identify open source software included in a Service in the Documentation. Some of these licenses require us to provide the open source software to you on the terms of the open source license instead of the terms of the Agreement. In that case, the terms of the open source license will apply, and you will have the rights granted in such licenses to the open source software itself, such as access to source code, right to make modifications, and right to reverse engineer. Notwithstanding the foregoing, if you are using the Services in the form provided to you, in accordance with your permitted use, with no distribution of software to third parties, then none of these open source licenses impose any obligations on you beyond what is stated in the Agreement.

2. Combining the Services with Open Source Software. A requirement of some open source licenses, sometimes known as “copyleft licenses,” is that any modifications to the open source software, or combinations of the open source software with other software (such as by linking), must be made available in source code form under the terms of the copyleft license. Examples of copyleft licenses include the GPL or LGPL, Affero, CPL, CDDL, Eclipse or Mozilla licenses. To the extent you are separately authorized by TORO to combine and distribute Services with any other code, you must make sure that your use does not: (i) impose, or give the appearance of imposing, any condition or obligation on us with respect to our Services (including, without limitation, any obligation to distribute our Services under an open source license); or (ii) grant, or appear to grant, to any third party any rights to or immunities under our intellectual property or proprietary rights in our Services. To be clear, you may not combine or otherwise modify our Services unless we expressly give you the right to do so under the terms of the Agreement.

3. Commercial Third Party Code in the Services.

3.1 The Services may also include components that we license commercially from third parties (“Commercial Components”). For the avoidance of doubt, all of the restrictions for the Services in the Agreement also apply to Commercial Components. Commercial

Components are also subject to some additional requirements as set forth below.

3.2 You may use Commercial Components only in conjunction with, as part of, and through the Services as provided by TORO. You may not install, access, configure or use any Commercial Components (including any APIs, tools, databases or other aspects any Commercial Components) separately or independently of the rest of the Service, whether for production, technical support or any other purposes, or otherwise attempt to gain direct access to any portions of the Commercial Components, or permit anyone else (including your customers) to do any of these things.

3.3 Some Commercial Components may include source code that is provided as part of its standard shipment. Commercial Component source code will be governed by the terms for Commercial Components in this supplement. Accordingly, notwithstanding any other terms of the Agreement, you may not modify any Commercial Components. You will be financially responsible to the applicable third party licensor ("Commercial Component Licensor") for all damages and losses resulting from your or your Authorized User's breach of this Section. You may not "benchmark" or otherwise analyze performance information for individual Commercial Component elements.

3.4 You understand that the applicable Commercial Component Licensor retains all ownership and intellectual property rights to the Commercial Component.
